Distemper /Parvo Vaccine

OPTIMUM WELLNESS PLAN RECOMMENDATIONS FOR YOUR PET:

What's next at home & what to watch out for: Today Riley's mass measured 3 in by 3 in, Dr. Zigelsky recommends getting it tested to know for sure that is a Lipoma

The above listed dvm strongly recommends and authorizes refills for 12 months of flea/tick and heartworm prevention, at this location, as long as an up-to-date Banfield heartworm test is on record. It is very important your pet stay on flea/tick/heartworm prevention monthly, year-round.

Monitor for vaccine reactions: vomiting, diarrhea, facial swelling, difficulty breathing, extreme lethargy, and hives.

If you need assistance after hours please contact Savannah Vet EC - 912-355-6113 or New River Veterinary Specialists- 843-898-6787

If you have any questions or concerns, please call your pet's doctor (see hospital phone above).

OPTIMUM WELLNESS PLAN clients can access 24/7 veterinary advice with Vet Chat on the Banfield app.
