

C: 9122268380 H: 9122268380

Notes
Heartworm Test: Negative
Physical exam determined your pet to be a healthy candidate to receive vaccinations today.
Your pet's exam was unremarkable today. No abnormalities were noted. All services/vaccines were completed.
We recommend that you establish a wellness program with your regular veterinarian.

Pet Fix Savannah

7215 Sallie Mood Drive, Savannah, GA 31406 | 912-354-6265

VACCINE CLINIC VISIT SUMMARY

Pet Name: Nectarine

Owner Name: Carolyn Mertz

By focusing on preventive health care, you are taking an important step in helping keep your pet happy and healthy for years to come.

The vaccine(s) that your pet received today are designed to stimulate specific immune responses to help protect against illness in the event of future exposure to the actual disease.

Vaccines provide proven life-saving benefits, and although side effects are possible, severe adverse events are uncommon. Most dogs and cats respond favorably following vaccine administration with minimal to no adverse consequences. However, vaccinating any patient carries some risk.

NORMAL IMMUNE RESPONSE TO VACCINES

Your pet may display self-limiting signs for 1-2 days following the administration of any vaccine. These signs include:

- Reduced appetite or loss of appetite (lasting for one or two feedings)
- Pain at the injection site
- Lethargy (lack of activity)
- Reluctance to walk/run
- Mild fever
- Mild cough, sneezing or mild nasal discharge (following intranasal vaccines)

These are common reactions and will generally resolve in 1-2 days. If these symptoms do not resolve or worsen, contact Pet Fix Savannah at 912-661-2793 or your primary care veterinarian.

MINOR REACTIONS

Sometimes after vaccinations, you will notice a small firm swelling (lump) at the injection site. This is expected to resolve within 1 month but contact Pet Fix Savannah at 912-661-2793, or your primary care veterinarian if the swelling:

- Is still painful after 1-2 days
- Continues to grow
- Persists beyond 1 month

LESS COMMON BUT SERIOUS REACTIONS

Contact Pet Fix Savannah at 912-661-2793, or your primary care veterinarian immediately if you notice any of these less common but more serious reactions:

- Vomiting
- Diarrhea
- Collapse
- Difficulty Breathing
- Facial Swelling
- Hives (itchy or bumpy skin)

Pet Fix Savannah is open Monday-Friday 8-4pm. If you notice any of the above reactions after hours contact your primary veterinarian or an emergency veterinarian immediately.
